

Sustainability, environmental and energy policy

At Yondr, we believe in a sustainable world, protecting the environment and safeguarding all of our tomorrows. We are committed to fulfil our sustainability and environmental compliance obligations and to take every reasonable measure to conduct our business activities responsibly. We aim to minimise any negative impact and, where possible, provide positive enhancements to the environment.

Our sustainability, environmental and energy plans are to:

- / Reduce our impact on the environment, including its fragile ecology, endeavouring always to prevent pollution and nuisance
- / Design services and facilities that strive to benefit and enhance the communities that surround them
- / Utilise the most efficient solutions practicable within our services and facilities concerning the consumption of energy, water and other utilities
- / Reduce our carbon emissions on a MW or m³ basis, and deliver Net Zero Carbon data centres at handover.
- / Take every reasonable step to eliminating waste and the continual use of resources in a circular economy
- / Encourage the use of walking, cycling, public transport or electric cars to reduce our impact on the environment
- / Integrating sustainability throughout all aspects of our organisation
- / Continually improve our management systems to enhance environmental performance and minimise the impact of our activities on the environment.
- / Remain compliant and certified to ISO 14001.

Various key performance indicators (KPIs) are used to provide visibility on where improvements may be needed. The Yondr Executive Leadership Team regularly reviews such KPI data. We periodically review our procedures to ensure they remain appropriate to our impact on sustainable and environmental activities and remain relevant to the purposes of the business.
