

## Environment and Sustainability Policy Statement

---

At Yondr we believe in a sustainable world, protecting our environment and sustaining quality of life. We are committed to fulfil our sustainability and environmental compliance obligations, to innovate, to improve sustainability, and to take every reasonable measure to conduct our business activities responsibly. We aim to enhance the broader welfare impact we have on the planet and the people involved directly in our activities and the communities in which we operate. We are committed to operating in an ethical and responsible manner.

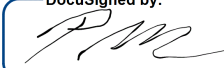

Climate change is a key issue for our business, and this policy should be read in conjunction with our Energy Policy.

### Our sustainability and environmental plans are to:

- / Ensure compliance with relevant legislative and regulatory requirements
- / Protect the environment, endeavouring always to prevent pollution and nuisance and to protect and enhance biodiversity
- / Enhance social value for the communities and environments where our data centres are located
- / Utilise the most efficient solutions practicable through our services and within our facilities concerning the consumption of energy, water and other utilities.
- / Continually monitor and externally verify our carbon footprint and aim to achieve Net Zero in Scope 1 and 2 emissions by 2030.
- / Work with our value chain to reduce scope 3 carbon emissions
- / Ensure zero waste to landfill in our data centre operations and maximise re-use of resources in a circular economy
- / Integrate sustainability across all stages of projects, from land selection to construction and operation
- / Review management systems regularly to ensure continual improvement and optimisation of our environmental performance
- / Adhere to ISO 14001 to ensure an effective environment management system

We regularly monitor and report on key performance indicators (KPIs) to provide visibility on where improvements may be needed. We periodically review our procedures to ensure they remain appropriate to our impact on sustainable and environmental activities and remain relevant to the purposes of the business.
